A Report on Thalassemia Camp Checkup Program on December,
28th & 29th 2021 of
BIRLA VISHVAKARMA MAHAVIDYALAYA

| | |
|------------|---|
| Event | Thalassemia Check-up Camp |
| Event Date | 28 th & 29 th December 2021 |
| Time | 9:30 AM to 6:00 PM |
| Location | BVM Central Library |

A NSS Thalassemia Check-up Camp was organized by TEAM NSS BVM in association with Indian Red Cross Society, on 28th & 29th December 2021, at BVM Central Library. A total of 441 Participants on 1st day(27th) and 547 Participants on 2nd day (28th) attended the Event.

Prof. Mayur Sevak, NSS Program officer motivated the students and welcomed Newly enrolled Students to get Check-up of Thalassemia. Students appreciated the same and thankful to our Principal, Dr. I. N. Patel Sir and NSS Team.

Thalassemia is one of the most prevalent disorders among inherited conditions-carried in genes and passing from one generation to other, affecting nearly 200 Million people Globally. The thalassemia screening committee of the university has informed deans of all the faculties regarding the new rules which make it mandatory for new students to get the test done in order to obtain their final eligibility.

Those students who haven't undergone such test can get the test done at concessional rate of Rs 75 at the university head Centre which has tied up with The Indian Red Cross Society. The blood report will be mailed to students or given to the Class representative of department individually. The blood report will also be available to the student at the university after five days from the date of blood collection.

Outcome of NSS Thalassemia Checkup Camp:-

All Students of college got Awareness about thalassemia Checkup. They got to know symptoms and side effects. This unusual benefit of thalassemia is a simple consequence of the body's response to the reduction in hemoglobin in the blood. Their body produces more cells to compensate, which then offers a protective effect against another disease that is also prevalent in the same region.

Given the significant impact of malaria, particularly on the global mortality of children, this benefit of thalassemia is notable. Up to two million deaths occur every year in Africa and Asia due to malaria and, in many of these regions, genetic mutations have risen, offering a form of protection.

The potentially beneficial effect of other types of thalassemia, such as beta-thalassemia, has not yet been established. However, it is possible that there are similar protective effects against malaria in other types of thalassemia.
